Tesselate and M7 Services Announce Strategic Partnership to Enhance Managed Services and Drive Scalable Value in Corporate Banking

London, United Kingdom - 7 November 2025 - Tesselate Group, a leader corporate banking and financial services consulting firm and ecosystem orchestration, and M7 Services, a leading provider of enterprise-class IT and infrastructure solutions, announce their partnership. Under this agreement, M7 Services will become part of Tesselate's Kinetic Mosaic ecosystem in managed services, thereby enhancing and scaling the operational backbone for corporate banking clients.

Through this partnership, **M7 Services** will provide key support to **Tesselate's Managed Services offering in the US market**, enhancing local operational performance and ensuring continuous technological support for financial institutions. The integration aligns with Tesselate's mission to break down silos within digital ecosystems, creating a unified, high-performing environment for data, applications, and infrastructure management.

"Tesselate has long set the standard for managed services within the corporate banking ecosystem, acting as an enabler for clients to focus on their business growth and digital transformation while we manage the day-to-day operations" said **Yuri Herman**, Head of Corporate Banking at Tesselate. "M7's deep expertise in IT operations, remote monitoring, and infrastructure management allows us to extend the agility and resilience of our Kinetic Ecosystem, empowering banks to achieve continuous uptime, regulatory compliance, and seamless customer experiences."

M7 Services brings a comprehensive suite of managed and professional support capabilities, including **Remote Monitoring and Management (RMM)**, **Network and Server Management**, **Endpoint and Cloud Services**, as well as **Data Management and Disaster Recovery**. Its structured, proactive approach ensures optimal performance across complex IT infrastructures, with continuous monitoring, issue prevention, and rapid resolution.

Beyond day-to-day management, M7 Services also delivers **strategic project management and professional services**, covering **new build IT planning**, **security audits**, **compliance and regulatory support**, and **large-scale technology deployments**. Each project is handled with end-to-end ownership, from design and implementation to ongoing optimization, a model that aligns seamlessly with Tesselate's lifecycle-driven methodology for corporate banking transformation.

"M7 has spent years redefining how technology supports performance, experience, and compliance across the industries we serve," said Charif Zahrane, Managing Partner at M7 Services. "Partnering with Tesselate allows us to extend that foundation even further, combining our infrastructure and service reliability with their world-class financial operations expertise to deliver secure, scalable solutions that anticipate and prevent issues before they ever reach the client." By combining Tesselate's **strategic consulting, integration expertise, and ecosystem orchestration** with M7's **operational excellence in managed IT**, this partnership sets a new benchmark for **managed services in corporate banking**. Clients can expect enhanced agility,

improved cost efficiency, and future-ready digital resilience across all operations, from core infrastructure to front-office innovation.

About Tesselate

Tesselate Group is a global consulting and technology orchestrator that helps financial institutions transform operations through connected ecosystems, intelligent automation, and end-to-end integration. Through its flagship solutions, **Kinetic Trade** and **Kinetic Lending**, Tesselate delivers seamless connectivity across systems, partners, and data flows, enabling digital modernisation at scale and empowering organisations to focus on growth and innovation.

Designed for resilience and compliance from the ground up, Tesselate's operating models are aligned with international standards such as **GDPR**, **NIS2**, and **DORA**, with controls mapped to **PCI DSS**, **SOC 2**, and **ISO/IEC 27001**, depending on organisational and regional needs. Its architecture supports **cross-border data flows**, **data-residency requirements**, and **continuous operational coverage**, ensuring secure and sustainable transformation across global financial environments.
